## FFT生记: 连度非周期的负额,振幅, 机烷

学面: 野陆庆P140~P141.

非周期函数的传动对变换对:

$$\frac{3}{1} = \int_{-\infty}^{\infty} A(k) \cos kx \, dk + \int_{-\infty}^{\infty} B(k) \sin kx \, dk$$

$$A(k) = \frac{1}{2} \int_{-\infty}^{+\infty} f(k) \cos kx \, dx$$

$$B(k) = \frac{1}{2} \int_{-\infty}^{+\infty} f(k) \sin kx \, dx$$

$$\frac{1}{2} \int_{-\infty}^{+\infty} f(k) \sin kx \, dx$$

刊記:  

$$f(\pi) = \int_{\infty}^{t\infty} dx F(\kappa) e^{+ikx} d\kappa$$
 solver
$$F(\kappa) = \int_{\infty}^{t\infty} f(\pi) e^{-ikx} d\pi$$
 solver

两形式关系,

$$\frac{A(k) + \partial B(k)}{z} = \frac{1}{2\pi} \int_{-\infty}^{+\infty} f(x) e^{ikx} dx$$

$$\frac{A(k) - iB(k)}{z} = \frac{1}{2\pi} \int_{-\infty}^{+\infty} f(x) e^{-ikx} dx = \frac{1}{2\pi} F(k)$$

$$F(k) 6 ikx = \frac{1}{2\pi} \int_{-\infty}^{+\infty} f(x) e^{-ikx} dx = \frac{1}{2\pi} F(k)$$

$$A(k) B(k)$$

振畅酱: 
$$C(k) = \sqrt{A^2 ck} + B^2 ck$$
 ,  $C(k) = \sqrt{\frac{F(ck)}{\pi}}^2 + I[\frac{F(ck)}{\pi}]^2 + I[\frac{F(ck)}{\pi}]^2$  能对应上

扬位语: 
$$\Phi(k) = \operatorname{ardan} \frac{\beta(k)}{A(k)}$$
 ,  $\Phi(k) = \operatorname{arotan} \frac{-\operatorname{IL} F(k)}{\operatorname{RL} F(k)}$ 

f(x)= ∫ CCk) COSC kx- Φ(n) dk , 振畅机注度积衡与合成形外 注意 k>0!! 无负数!! 又拉上、深渊 orctan 最而正分 Sh Ckx- Φ(n) 来合成

$$f(x) = \int_{-\infty}^{\infty} A(\kappa) \cos kx \, d\kappa + \int_{-\infty}^{\infty} \beta(\kappa) \sin kx \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \left[ G_{\kappa} kx \, G_{\kappa} \underline{f}(\kappa) + \sin kx \, d\kappa + \sin \overline{f}(\kappa) \right] \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) - \overline{f}(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, G_{\infty} C(\kappa) \, d\kappa$$

$$= \int_{-\infty}^{\infty} C(\kappa) \, d\kappa$$

サ可为 
$$f(s) = \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times Sh \overline{\ell}(k) + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times G_0 k \times G_0 k + Sin k \times Cos \overline{\ell}(k) \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times G_0 k \times G_0 k + Sin k \times G_0 k \times G_0 k \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times G_0 k \times G_0 k \times G_0 k \times G_0 k \right] dk$$

$$= \int_{-\infty}^{\infty} CC(k) \left[ G_0 k \times G_0$$

① A(K)-iB(K) = 元 F(K)知何例? 把到刊1里(K)K, ShKX 好成 C指数刊制, 即可推出, 略.
